**The Aggregates Industry**

**Quick Facts**

Indiana ranks 1st nationally in the production of air-cooled blast furnace and steel furnace slag.

Aggregates are produced from 205 surface and underground mines in Indiana.

Aggregates mining occurs in seventy-nine of the ninety-two Indiana counties.

Approximately 28,603 lbs. of aggregate are required for each Indiana resident per year.

Companies in Indiana produce approximately 45.2 million metric tons of crushed stone and 17.4 million metric tons of sand and gravel annually.

Indiana aggregate facilities logged over 4.5 million hours in 2018.

The facts below are current as of 2009. They were compiled by the Indiana Mineral Aggregates Association, Indiana Geological Survey, National Stone, Sand & Gravel Associations and the U.S. Geological Survey. Special thanks to Kathryn Shaffer of the Indiana Geological Survey and Mary Foster, an industry researcher.

Indiana aggregate facilities logged over 4.5 million hours in 2018.

Slag is used as the surface material at the Indianapolis Motor Speedway because its angular, sharp texture creates excellent traction and skid resistance.
